PROFESSIONAL SUMMARY

Information Technology graduate from KMUTT with a strong foundation in backend systems, scalable application development, and infrastructure management. Hands-on experience through internships in designing internal dashboards, developing microservices and mapping inter-service API dependencies, and implementing security monitoring (SonarQube, CVE tracking). Proficient in streamlining workflows through automation and DevOps practices, with a proven ability to bridge development, infrastructure, and quality assurance to deliver robust technical solutions.

SKILLS

- **Programming Languages:** Java, Go, Python, JavaScript, Dart, SQL
- **Frameworks & Testing:** Spring Boot, Go (Echo), FastAPI, React (Vite), Vue.js, Flutter, JUnit 5, Mockito, Karate
- **Databases:** PostgreSQL, MySQL, Redis, MinIO
- **Tools & DevOps:** Docker, Jenkins, n8n, Git, SonarQube, Trivy, Nexus

WORK EXPERIENCE

TMBThanachart Bank Public Company Limited
January 2025 - July 2025

TTB spark academy

position : Software Developer Intern (Backend)
Tech Stack : Java, Spring Boot, Gradle, PostgreSQL, SonarQube, Trivy, REST APIs, Bitbucket, Jira, Git

- Internal Developer Portal: Developed and maintained a centralized internal dashboard to streamline microservice management and monitoring across 350+ microservices, featuring:
  - Service Registry: Aggregated quick information and deployment history for each microservice.
  - Dependency Health Check: Built a Gradle task exporting each service's dependency tree as JSON, and tracked outdated dependencies with secure version recommendations.
  - SonarQube Integration: Integrated SonarQube reports to visualize code quality metrics and scan results from various services.
  - Favorite Microservice: Added a bookmarking feature allowing developers to quickly access and monitor their preferred microservices.
  - CVE & Release Comparison Report: Designed a tool to compare CVE metrics across releases, with a Java tool merging Trivy scan reports per release.
- API Relationship Mapping Microservice: Designed and developed a dedicated microservice to map and analyze complex API dependency trees and relational logic (e.g., tracing how API A aggregates data from API B and C, which may in turn depend on other downstream APIs) to visualize inter-service architecture.
- Quality Assurance (QA) Support: Collaborated with the QA team to design, execute, and validate manual test cases based on project requirements, ensuring high software reliability before deployment.

King Mongkut's University of Technology Thonburi
May 2023 - July 2023

position : IT Support Specialist (Work-Study Student)

- Managed and prepared smart classrooms, including hardware setup and equipment arrangement prior to lectures.
- Installed, configured, and maintained classroom IT hardware and peripherals, ensuring seamless operation for faculty and students.
- Automated lecture video recording workflows using Microsoft Power Automate, reducing manual effort and improving operational efficiency.
- Provided technical support and troubleshooting for infrastructure equipment within the faculty.

EDUCATION

King Mongkut's University of Technology Thonburi 2022 - 2026
B.Sc. (Information Technology), School of Information

PROJECTS

D&D AI DM September 2026 - Present
Solo Project — AI Dungeon Master Web App
https://github.com/c3b22/dnd-ai-dm

Project Summary: A multiplayer web app where Google Gemini acts as the Dungeon Master, narrating in Thai and resolving each player's action per round.

Role : Full Stack Developer (solo)

Responsibility :

- AI Dungeon Master: Integrated Gemini through the Vercel AI SDK to narrate in Thai and resolve each player's action per round with atomic HP and game-state updates.
- Supabase Backend: Designed anonymous auth, Realtime and row-level security with 35 SQL migrations, deployed on Vercel.
- Game Systems & Testing: Built inventory, economy and shareable adventures with Next.js 15, React 19 and TypeScript, covered by 1,700+ automated tests (Vitest).

YourPace June - August 2026
Solo Project — Full Lifecycle Development
https://github.com/YourPace-Health

Project Summary: YourPace is a personal health and fitness platform with an AI nutrition tracker, a fitness mentor chatbot and Google Calendar workout scheduling.

Role : Full Stack Developer

Responsibility :

- User Authentication & Profiles: JWT authentication, Google OAuth and Redis-backed email OTP, with personalized user profiles.
- Workout Scheduling: Integrated Google Calendar via OAuth 2.0 and used n8n AI workflows to plan workouts into free time slots.
- Health Tracking & AI Mentor: Logged meals, calories, water and weight, with a Gemini API mentor chat and meal analysis.

FinanceCare — Debt & Financial Management Platform October 2025 - March 2026
https://github.com/financeCare

Project Summary: FinanceCare is a personal finance and debt management platform with debt payoff strategies, AI-powered OCR slip verification and job discovery.

Role : Full Stack Developer

Responsibility :

- Engineered Debt Repayment Engine: Built pluggable Snowball, Avalanche, Minimum-only and Optimal-cost strategies using the Strategy and Factory patterns and BigDecimal interest calculators.
- Implemented Authentication & Security: Developed stateless JWT authentication with refresh tokens, Redis-backed OTP email verification, and Google and LINE login.
- Code Quality & Testing: Wrote unit and integration tests with JUnit 5 and Mockito, and used SonarQube with JaCoCo for coverage.
- End-to-End Application: Built the Spring Boot REST API, a Flutter mobile app and a Python EasyOCR service, containerized with Docker Compose.
