PROFESSIONAL SUMMARY

Information Technology graduate from KMUTT with a strong foundation in backend systems, scalable application development, and infrastructure management. Hands-on experience through internships in designing internal dashboards, building complex microservice architectures, and implementing security monitoring (SonarQube, CVE tracking). Proficient in streamlining workflows through automation and DevOps practices, with a proven ability to bridge development, infrastructure, and quality assurance to deliver robust technical solutions.

SKILL

- **Programming Languages:** Java,Python, JavaScript, SQL
- **Frameworks & Libraries:** Spring Boot, FastAPI, Vue.js, Mockito
- **Databases:** PostgreSQL, MySQL
- **Tools & DevOps:** Docker, Git

WORK EXPERIENCE

TMBThanachart Bank Public Company Limited — January 2025 - July 2025
TTB spark academy

position : Software Developer Intern
Tech Stack : Java, Spring Boot, PostgreSQL, SonarQube, REST APIs,Bitbucket, Jira, Git

- Internal Developer Portal: Developed and maintained a centralized internal dashboard to streamline microservice management and monitoring across the organization, featuring:
  - Service Registry: Aggregated quick information and deployment history for each microservice.
  - Dependency Health Check: Implemented a feature to track outdated dependencies across services and recommend secure, up-to-date versions.
  - SonarQube Integration: Integrated SonarQube reports to visualize code quality metrics and scan results from various services.
  - Favorite Microservice: Added a bookmarking feature allowing developers to quickly access and monitor their preferred microservices.
  - CVE & Release Comparison Report: Designed a security reporting tool to track CVE vulnerabilities and compare metrics across different software releases.
- API Relationship Mapping Microservice: Designed and developed a dedicated microservice to map and analyze complex API dependency trees and relational logic (e.g., tracing how API A aggregates data from API B and C, which may in turn depend on other downstream APIs) to visualize inter-service architecture.
- Quality Assurance (QA) Support: Collaborated with the QA team to design, execute, and validate manual test cases based on project requirements, ensuring high software reliability before deployment.

King Mongkut's University of Technology Thonburi May 2023 - July 2023

position : IT Support Specialist (Work-Study Student)

- Managed and prepared smart classrooms, including hardware setup and equipment arrangement prior to lectures.
- Installed, configured, and maintained classroom IT hardware and peripherals, ensuring seamless operation for faculty and students.
- Automated lecture video recording workflows using Microsoft Power Automate, reducing manual effort and improving operational efficiency.
- Provided technical support and troubleshooting for infrastructure equipment within the faculty.

EDUCATION

King Mongkut's University of Technology Thonburi 2022 - 2026

B.Sc. (Information Technology), School of Information

PROJECTS

YourPace June - August 2026

Solo Project — Full Lifecycle Development

https://github.com/YourPace-Health

Project Summary: youPace is an intelligent personal health and fitness ecosystem designed to help users track and analyze wellness metrics, receive personalized health and nutrition guidance from an AI-powered mentor, seamlessly schedule and sync workout routines with Google Calendar, and monitor daily lifestyle habits to optimize their overall physical well-being.

Role : Full Stack Developer

Responsibility :

- User Authentication & Profiles: Securely managing user registration, JWT authentication, Google OAuth integration, and personalized user profile configurations.
- Physical Activity & Workout Scheduling: Tracking exercise logs and seamlessly syncing fitness routines with Google Calendar through n8n workflow automation.
- Dietary & Health Monitoring: Logging daily meal plans, calorie intakes, water consumption, and body weight trends to assist with health habit formation.
- AI-Powered Mentorship & Chat: Integrating with Google Gemini API to analyze health data and provide interactive, real-time lifestyle and fitness coaching.
- Health Analytics & Metric Calculations: Processing raw user data to calculate health indices (such as BMI) and displaying progress summaries via check-in charts and dashboards.

FinanceCare — Debt & Financial Management Platform
October 2025 - March 2026

https://github.com/financeCare

Project Summary : FinanceCare is an intelligent personal finance and debt management platform designed to help users analyze financial health, calculate optimal debt payoff strategies, verify transaction slips using AI-powered OCR, and discover supplementary job opportunities to improve debt repayment efficiency.

Role : Full Stack Developer

Responsibility :

- Engineered Debt Repayment Calculation Engine: Designed and implemented a flexible debt payoff calculation system using Strategy and Factory Design Patterns, supporting Debt Snowball and Debt Avalanche algorithms to optimize repayment schedules and minimize interest accrual.
- Architected Multi-Container Microservices Infrastructure: Containerized and orchestrated Backend APIs, Redis, MinIO Object Storage, and a Python EasyOCR microservice using Docker Compose connected via custom container networks.
- Implemented Robust Authentication & Security: Developed stateless JWT authentication, role-based access control (RBAC), Redis-backed OTP email verification, and OAuth2 integration (Google & LINE Login).
- Enforced Code Quality & Testing Standards: Automated unit/integration testing with JUnit 5, integrated JaCoCo for code coverage analysis, and utilized SonarQube for static code analysis and code smell prevention.
- Developed End-to-End Financial Application: Built a full-stack platform featuring a Spring Boot RESTful API backend and a responsive Flutter mobile app utilizing Clean Architecture and data visualization graphs.

Employee Training Record System
November 2024

Solo Project — Full Lifecycle Development

https://github.com/EmployeeTrainingRecord

Responsibility :

- Architected & Developed a full-stack web application from scratch using Vue 3 (Vite) for the frontend and Java 17 (Spring Boot 3.3) for the backend RESTful API.
- Designed Responsive UI/UX using TailwindCSS and DaisyUI, building intuitive single-page application (SPA) components for managing training logs, courses, and user profiles.
- Implemented Secure Authentication & Authorization end-to-end using JWT (Access & Refresh Tokens), Spring Security, and Argon2 password hashing, managing client-side auth state and protected routes via Vue Router Guards.
- Engineered Multi-Datasource Backend Infrastructure segregating User Data and Training Records across dual MySQL databases to enforce data isolation and security.
- Integrated RESTful APIs & Dynamic State using Fetch API/Axios with client-side validation and centralized backend error handling (@ControllerAdvice) for seamless user experience.
